PROFESSIONAL SUMMARY

Engineering student specializing in Communications & Electronics, with a growing focus on Artificial Intelligence, Data Science, Python, and practical problem-solving. Building hands-on experience through data projects, web scraping, AI learning, and engineering applications, with a strong interest in developing intelligent systems that connect software with real-world engineering problems.

EDUCATION

Al-Azhar University — Faculty of Engineering

B.Sc. in Engineering | Communications & Electronics | Expected Graduation: 2029

Digital Egypt Pioneers Initiative (DEPI) — Data Science Track

Artificial Intelligence Course — The British University in Egypt (BUE)

Oracle Training Program

TECHNICAL SKILLS

Python • Web Scraping • Selenium • C++ Fundamentals • MATLAB Fundamentals • Data Analysis Fundamentals • Data Visualization Fundamentals • Machine Learning Fundamentals • Google Colab • Jupyter Notebook

Engineering Mathematics • Calculus • Linear Algebra Fundamentals • Circuit Analysis • Communications & Electronics Fundamentals • Problem Solving

PROJECTS

Student Performance Prediction Using Data Science

- Proposed a data-driven system to predict student academic performance and identify students who may need additional support.
- Explored relevant educational data and the role of predictive models in turning raw data into useful insights.
- Technologies: Python • Data Science • Machine Learning

Wuzzuf Job Data Web Scraper

- Built a Python web-scraping task using Selenium to collect job listings from Wuzzuf.
- Extracted fields including job title, company, location, job type, workplace type, and application link.
- Organized scraped data for easier analysis and reuse.
- Technologies: Python • Selenium • Web Scraping

IoT-Based Smart Monitoring System — Engineering Project Concept

- Designed a concept for an intelligent monitoring system combining sensors, communication, and data analysis.
- Focused on collecting real-world sensor data and using software to monitor conditions and generate useful insights.
- Relevant to Communications & Electronics, IoT, and AI applications.

LEARNING & DEVELOPMENT

- Developing practical skills in Python, Data Science, Artificial Intelligence, and Machine Learning.
- Practicing programming fundamentals, data handling, web scraping, and technical problem-solving.
- Building an interdisciplinary foundation connecting engineering, software, data, and intelligent systems.

SOFT SKILLS

Analytical Thinking • Problem Solving • Adaptability • Self-Learning • Communication • Presentation • Teamwork • Time Management

LANGUAGES

Arabic — Native | English — B1

INTERESTS

Artificial Intelligence • Data Science • Communications & Electronics • IoT • Programming • Technology • Chess • Fitness
